

Acceptance Testing

UAT Execution & Report Submission

Date	03 October 2026
Team ID	SWTID-2026-4310
Project Name	Implement Client Script & UI Policy (Incident)
Program / Module	ServiceNow System Administrator
Project Status	Pending — group not formed / testing not started

1. Purpose of Document

This document summarizes the planned User Acceptance Testing (UAT) coverage for the SkillWallet group project **Implement Client Script & UI Policy (Incident)** in the ServiceNow System Administrator module. The project covers an Incident-table UI Policy and UI Policy Action for the **Urgency** field, plus **onChange**, **onSubmit**, and **onCellEdit** Client Scripts. The project overview supplied indicates that the group has not yet been formed and testing has not started.

2. Defect Analysis

No defect execution results were provided. The table below is intentionally left as unrecorded rather than showing invented defect counts; update it after testing begins.

Severity	Identified	Resolved / Closed	Open	Notes
Severity 1 — Critical	—	—	—	Not yet tested
Severity 2 — High	—	—	—	Not yet tested
Severity 3 — Medium	—	—	—	Not yet tested
Severity 4 — Low	—	—	—	Not yet tested
Total	—	—	—	Awaiting execution

Defect resolution categories (for example, Fixed, Duplicate, By Design, or Not Reproduced) should be recorded only when an issue has actually been logged and reviewed.

3. Test Case Analysis

The following cases are based on the milestones listed in the project overview. Results remain pending until the project is started and the cases are executed.

Test Area	Planned Check	Status
UI Policy setup	Create a UI Policy on the Incident table and verify its condition.	Not run
UI Policy Action	Configure the action for the Urgency field and verify the expected field behavior.	Not run
onChange Client Script	Change the relevant field value and verify the intended client-side response.	Not run
onSubmit Client Script	Attempt to save with valid and invalid form values; confirm save validation behavior.	Not run
onCellEdit Client Script	Attempt a list edit and verify that the required edit behavior or blocking rule is enforced.	Not run

4. Test Coverage & Expected Checks

The project overview specifically calls for testing mandatory-field enforcement, form-save validation, reverse-condition behavior, list-edit blocking, and form-based updates. Use the checklist below to record the outcome once each test has been performed.

ID	Acceptance Check	Expected Observation	Result
TC-01	Mandatory field enforcement	The configured policy makes the intended field mandatory when its condition is true.	Pending
TC-02	Reverse condition behavior	When the condition becomes false, the field behavior reverses as configured.	Pending
TC-03	Form save validation	Invalid submission is handled by the onSubmit validation; valid submission follows the intended path.	Pending
TC-04	List-edit blocking	The onCellEdit logic enforces the specified rule when a user edits a value in a list.	Pending
TC-05	Form-based updates	The corresponding form update behaves as intended and is not incorrectly blocked.	Pending

5. Implementation Flow (Illustrative)

This simple flow summarizes the implementation sequence described in the project milestones; it is an illustration, not a screenshot of the SkillWallet or ServiceNow workspace.

Incident table^{UI Policy + Urgency action} Client Scripts
onChange / onSubmit onCellEdit UAT checks

6. Current Status & Next Steps

Current status: Group not formed yet; stories have not been assigned and testing has not started, according to the project overview provided.

Next steps: Start the group project or proceed individually, assign the milestone stories, implement the UI Policy and Client Scripts, execute the test cases, and replace each “Pending / Not run” status with the actual result and any logged defect reference.

Reporting note: This report is a project-specific adaptation of the uploaded UAT template. Test outcomes and defect totals have not been fabricated; they should be completed after execution.
