

Project Design Phase

Problem - Solution Fit Template

Date: 03 October 2026

Team ID: SWTID-2026-4310

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 2 Marks

Problem - Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit.
- Understand the existing situation in order to improve it for your target group.

Project Problem-Solution Mapping:

Target Audience / Customer:

ServiceNow System Administrators and IT Service Management (ITSM) users interacting with the Incident table.

Problem Identified:

Manual data entry errors, lack of dynamic field enforcement, unauthorized list edits, and invalid form submissions on the Incident table lead to poor data quality and broken ITSM workflows.

Proposed Solution:

Implementing automated Client Scripts and UI Policies to strictly enforce data rules on the Incident table. This includes setting up UI Policy Actions for the 'Urgency' field, configuring 'onChange' scripts for real-time updates, 'onSubmit' scripts to validate saves, and 'onCellEdit' scripts to block unauthorized list edits.

Key Project Activities & Milestones:

Project Design Phase

Problem - Solution Fit Template

- * Milestone 1: Create UI Policy on the Incident table.
- * Milestone 2: Create UI Policy Action for the Urgency field.
- * Milestone 3: Create an onChange Client Script.
- * Milestone 4: Create an onSubmit Client Script (Save Validation).
- * Milestone 5: Create an onCellEdit Client Script.
- * Milestone 6: Test mandatory field enforcement, form save validations, reverse condition behaviors, list-edit blocking, and form-based updates.
