

Project Design Phase

Problem · Solution Fit Template

Date 03 October 2026

Project Name Implement Client Script & UI Policy (Incident)

Program / Module ServiceNow System Administrator

Team ID SWTID-2026-4310

Project Focus Incident form usability, field behavior and data validation

Project Purpose

- Improve the Incident form experience using UI Policies and Client Scripts.
- Make field behavior respond to Incident conditions and user actions.
- Enforce required fields and validate data before saving.
- Reduce incorrect data entry and improve data consistency.
- Test form behavior, save validation, reverse conditions and list editing.

Project Milestones

- 1 Create UI Policy on Incident

2 Create UI Policy Action · Urgency

3 Create onChange Client Script

4 Create onSubmit Client Script · Save Validation

5 Create onCellEdit Client Script

6 Testing the Configuration

Source structure adapted from the uploaded Problem-Solution Fit Template.

ServiceNow System Administrator · Incident Configuration

Purpose / Vision

Problem-Solution fit canvas is licensed under a Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 license Created by Daria Nepriakhina / Amaltama.com

Purpose / Vision: Make ServiceNow Incident handling more consistent, dynamic and reliable.

1. CUSTOMER CUSTOMER SEGMENT(S)

SEGMENT(S)

Who is your customer? i.e. working parents of 0-5 y.o. kids

6. CUSTOMER CONSTRAINTS

5. AVAILABLE SOLUTIONS

2. JOBS-TO-BE-DONE / PROBLEMS

9. PROBLEM ROOT CAUSE

7. BEHAVIOUR

3. TRIGGERS

4. EMOTIONS: BEFORE / AFTER

6. CUSTOMER CONSTRAINTS

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.

5. AVAILABLE SOLUTIONS

· ServiceNow Incident form users

Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do

· ServiceNow administrators / configurators

these solutions have? i.e. pen and paper is an alternative to digital notetaking

· Teams handling Incident records and field updates

2. JOBS-TO-BE-DONE / PROBLEMS

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than

one; explore different sides.

· Users need clear field behavior while entering incidents.

· Manual field changes can lead to inconsistent data.

· Rules must work dynamically without requiring form submission.

· List editing needs separate validation/control.

· Standard Incident form behavior

· Manual field updates by users

· UI Policies for conditional field behavior

· Client Scripts for dynamic client-side validation and automation

· Make Incident fields respond to Impact and user actions.

· Make required fields explicit when conditions are met.

· Automatically update related values when needed.

· Validate records before saving.

· Prevent invalid State changes through list editing.

9. PROBLEM ROOT CAUSE

What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations.

7. BEHAVIOUR

What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

3. TRIGGERS

What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.

The Incident form needs dynamic rules so that field behavior and validation can respond to conditions and user actions instead of relying only on manual entry. Users enter or edit Incident records, change fields such as Impact, save records, and may edit records directly from a list. The configuration responds to these actions.

- Impact is changed
- User attempts to save an Incident
- User edits Incident data from a list

Before: uncertainty about which fields are required or what values should change. After: clearer, guided and more consistent Incident entry.

10. YOUR SOLUTION

8. CHANNELS OF BEHAVIOUR

10. YOUR SOLUTION

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.

8. CHANNELS of BEHAVIOUR

8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7

4. EMOTIONS: BEFORE / AFTER

How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design.

A ServiceNow Incident configuration using UI Policies and Client Scripts:

- UI Policy + Urgency action
- onChange automation
- onSubmit save validation
- onCellEdit list control
- Testing of the complete configuration

8.1 ONLINE

- ServiceNow Incident form
- ServiceNow list interface
- Client-side form interactions

8.2 OFFLINE

- Not specified in the project material; work is performed within the ServiceNow system.

INCIDENT Impact 1 - High Urgency 1 - High State Open

8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. **UI Policy**
Client Script
