

Project Design Phase

Proposed Solution Template

Date	03 October 2026
Team ID	SWTID-2026-4310
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Proposed Solution Template:

The project proposes using **ServiceNow UI Policies and Client Scripts** on the **Incident** table to improve form usability, control field behaviour, validate data before saving, and reduce incorrect updates during form and list editing.

Assignment Group • Validation

CLIENT SCRIPTS onChange • onSubmit

UI POLICY

onCellEdit

INCIDENT FORM

Impact → Urgency

Mandatory / field behaviour Reverse when condition is false

S.No.	Parameter	Project-Specific Description
1	Problem Statement (Problem to be solved)	Incident records may contain incorrect, incomplete, or inconsistent field values. Users need clear field behaviour, mandatory-field enforcement, save validation, and control over direct list editing.
2	Idea / Solution description	Configure the ServiceNow Incident table using UI Policies and Client Scripts. The project covers a UI Policy, a UI Policy Action for Urgency, an onChange script, an onSubmit save-validation script, and an onCellEdit script to control and validate Incident updates.
3	Novelty / Uniqueness	At the project level, the solution combines multiple ServiceNow client-side controls—UI Policy behaviour plus onChange, onSubmit, and onCellEdit scripts—so Incident data is handled consistently across form interactions and list editing.
4	Social Impact / Customer Satisfaction	Improves the experience of Incident users by giving immediate feedback and appropriate field behaviour. It helps reduce incorrect data entry and supports better data consistency for teams handling incidents.
5	Business Model (Revenue Model)	This is an educational ServiceNow configuration project, so no direct revenue model is defined. In a real organization, similar ServiceNow configurations can support internal IT service management and operational workflows.

6	Scalability of the Solution	The configuration can be extended with additional UI Policies, Client Scripts, validation rules, and related Incident conditions. The same approach can also be adapted to other ServiceNow tables with table-specific rules.
---	------------------------------------	---

Project milestones covered: 1) Create UI Policy on Incident 2) Create UI Policy Action – Urgency 3) Create onChange Client Script 4) Create onSubmit Client Script (Save Validation) 5) Create onCellEdit Client Script 6) Testing the Configuration.
