

PROJECT DOCUMENTATION

Implement Client Script & UI Policy (Incident)

Project Title	Implement Client Script & UI Policy (Incident)
Program / Module	ServiceNow System Administrator
Project Workspace	SkillWallet
Team Members	Akshaya B (Team Lead), Madhusri S T
Project Status	Work and milestones completed and reviewed ; need to be verified by the mentor
Report Date	03 October 2026

This document follows the uploaded "FSD Documentation Format.docx" structure, adapted to the supplied ServiceNow project. The template mentions MERN, but the project described here is a ServiceNow configuration project, so React/Node.js/MongoDB details are not assumed.

1. INTRODUCTION

Project Title: Implement Client Script & UI Policy (Incident).

Team Members: No team members have been assigned because the group has not yet been formed. Add names and roles when the team is created.

2. PROJECT OVERVIEW

Purpose: Configure and validate client-side behavior on the ServiceNow Incident table using a UI Policy, a UI Policy Action for the Urgency field, and Client Scripts.

Planned features: Incident-table UI Policy; UI Policy Action for Urgency; onChange Client Script; onSubmit Client Script for save validation; onCellEdit Client Script; and acceptance checks for mandatory-field enforcement, reverse conditions, list-edit blocking, and form-based updates.

Current status: The project has not started according to the supplied overview. These are planned features, not completed or verified functionality.

3. ARCHITECTURE

Platform: ServiceNow. **Target record/table:** Incident. **Workspace:** SkillWallet learning/project environment.

Configuration layer: UI Policy and UI Policy Action control configured form-field behavior. Client Scripts are planned for onChange (field change), onSubmit (form submission validation), and onCellEdit (list-cell edits).

Data layer: Incident records are managed by the ServiceNow platform. No custom database schema or external database was specified in the project brief.

Conceptual architecture — implementation details remain pending

4. SETUP INSTRUCTIONS

Prerequisites: Access to the appropriate ServiceNow training instance and the SkillWallet project workspace, plus permissions to create or update UI Policies and Client Scripts. Exact instance version and role requirements were not provided.

Setup sequence: 1) Start the group project or choose to proceed individually. 2) Assign milestone stories if working as a team. 3) Open the ServiceNow configuration workspace. 4) Create the Incident UI Policy and Urgency UI Policy Action. 5) Add the three Client Scripts. 6) execute the planned acceptance tests and record evidence.

5. FOLDER STRUCTURE

This project is configured within ServiceNow rather than described as a conventional source-code repository. The corresponding logical organization is:

Configuration item	Purpose
UI Policy — Incident	Defines the condition that governs form behavior.
UI Policy Action — Urgency	Defines the configured behavior for the Urgency field.
Client Script — onChange	Responds to a relevant field value change.
Client Script — onSubmit	Validates a form submission before it proceeds.
Client Script — onCellEdit	Handles or validates list-cell edit behavior.
Test evidence / defect log	Records actual test outcomes and any issues found.

6. RUNNING THE APPLICATION

The template's npm commands apply to MERN applications and are not applicable to the supplied ServiceNow configuration project. To run or review this project, access the configured ServiceNow instance and open the Incident form or list. Exact instance URL and access instructions were not supplied.

7. API DOCUMENTATION

No custom backend API endpoints were identified in the project description. The scope supplied is UI Policies and Client Scripts in ServiceNow. If the implementation later calls Scripted REST APIs or other services, document their methods, parameters, authorization, and example responses here.

8. AUTHENTICATION

Authentication is expected to use the access controls of the ServiceNow environment. The project brief does not specify authentication configuration, roles, session handling, or authorization changes; do not treat these as implemented project features.

9. USER INTERFACE

The relevant user interface is the ServiceNow Incident form and list. Planned UI behavior includes the Urgency field action, form validation, and list-cell edit behavior. No live screenshots were supplied; insert genuine screenshots after implementation.

10. TESTING

The project overview specifies tests for mandatory-field enforcement, form-save validation, reverse-condition behavior, list-edit blocking, and form-based updates. The cases below are planned; results remain untested until execution.

ID	Test scenario	Expected result	Status
TC-01	Mandatory field enforcement	Field becomes mandatory when configured condition is true.	Not run
TC-02	Reverse condition	Field behavior reverses when condition becomes false.	Not run
TC-03	onSubmit validation	Invalid form submission is handled; valid submission follows intended flow.	Not run
TC-04	List-cell edit	Edit is accepted or blocked according to the defined rule.	Not run
TC-05	Form-based update	Form update behaves consistently with requirements.	Not run

Performance thresholds and test tools were not specified. Define any required timing targets before claiming performance

11. SCREENSHOTS OR DEMO

results. Evidence to add after implementation: (1) Incident UI Policy condition; (2) UI Policy Action for Urgency; (3) onChange script; (4) onSubmit script; (5) onCellEdit script; and (6) form/list behavior during testing. No screenshots or demo URL were supplied, so no fabricated UI images are included.

12. KNOWN ISSUES

No defects have been reported because testing has not been confirmed as started. Current project blocker: group formation or individual project start is still pending. Record any issues discovered during execution in a defect log with severity, steps to reproduce, and resolution.

13. FUTURE ENHANCEMENTS

Potential follow-up work includes documenting detailed acceptance criteria, testing edge cases and user roles, maintaining a defect log, capturing before/after screenshots, and reviewing client-side rules for maintainability. Any additional enhancement should be confirmed against project requirements.

APPENDIX — PROJECT REFERENCES

Source code: Not supplied; add the final script code or configuration details after implementation.

Dataset link: No dataset was identified in the supplied project brief.

GitHub / demo link: Not provided. The SkillWallet project page was supplied by the user; access may require sign-in.

Source note: Content is based on the project details provided by the user and the uploaded "FSD Documentation Format.docx". MERN-specific template items have been adapted to the stated ServiceNow project; unprovided technical details and outcomes are marked pending.
