

Project Design Phase-II

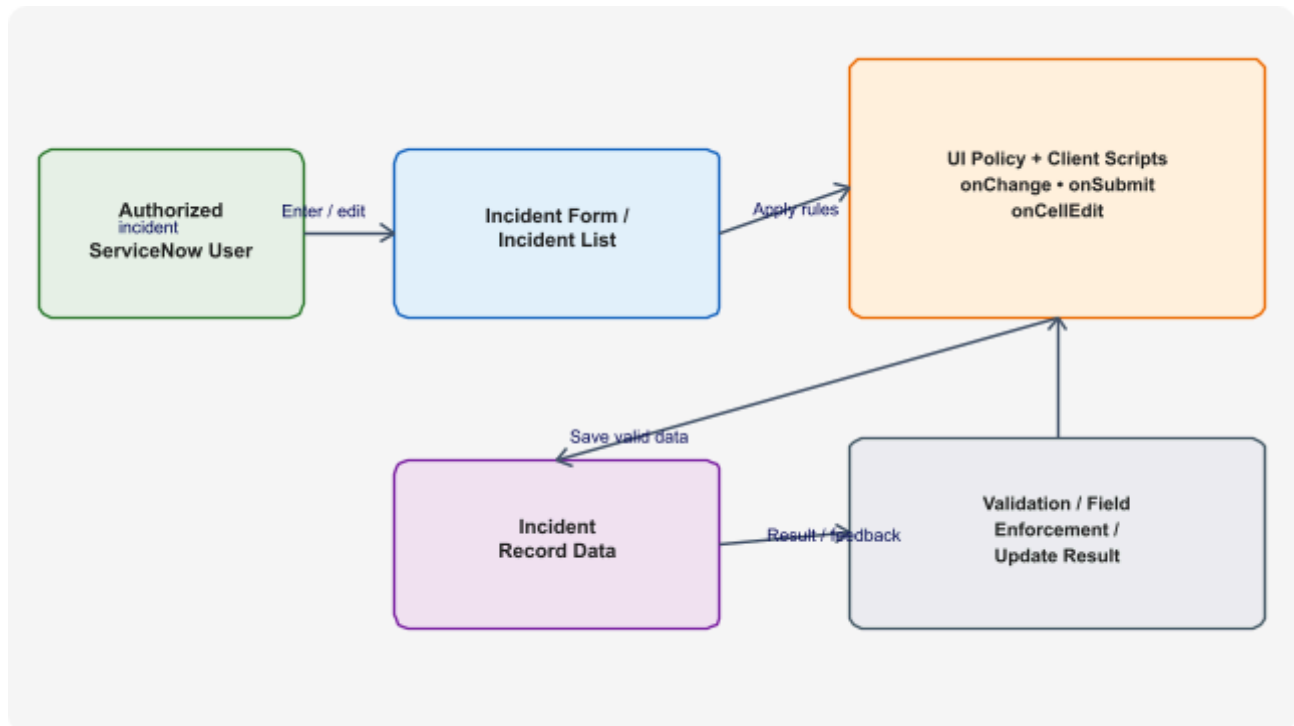

Data Flow Diagram & User Stories

Date	03 October 2026	Team ID	SWTID-2026-4310
Project Name	Implement Client Script & UI Policy (Incident)	Maximum Marks	4 Marks
Program / Module	ServiceNow System Administrator		

Data Flow Diagrams:

A Data Flow Diagram (DFD) visually represents how incident information moves through the ServiceNow system. An authorized user works with the Incident form and list, while UI Policies and Client Scripts control field behavior, validation, and list-edit enforcement before changes are saved.

Example: Simplified DFD – ServiceNow Incident Controls

DFD flow: Authorized user → Incident form/list → UI Policy & Client Scripts → Incident record data → validation/enforcement result.

User Stories

Use the below template to list all the user stories for the project.

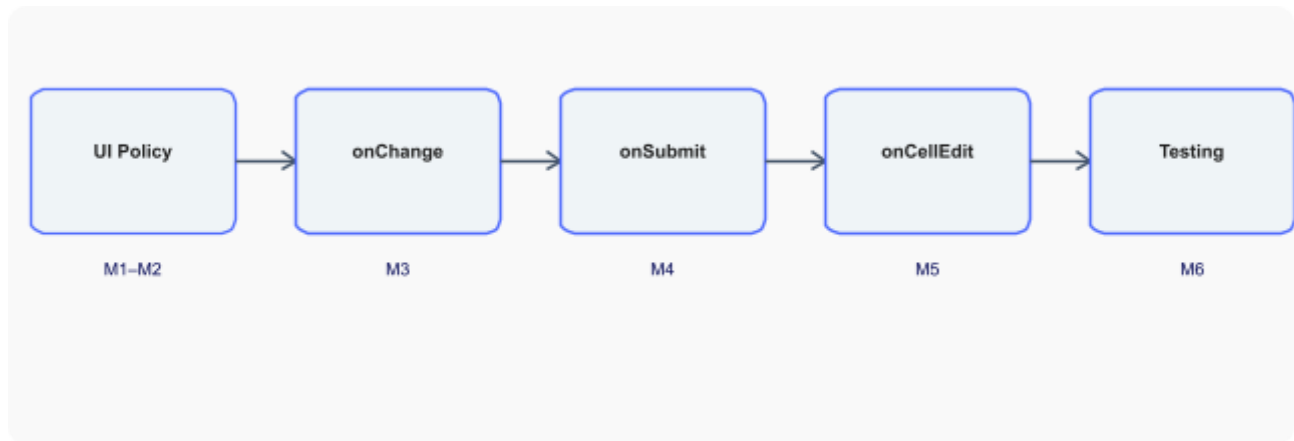

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
ServiceNow Administrator / Authorized Staff	UI Policy	USN-1	Create a UI Policy on the Incident table to control incident form behavior.	UI Policy is created on Incident and its condition/behavior works correctly on the form.	High	Sprint-1
ServiceNow Administrator / Authorized Staff	UI Policy	USN-2	Create a UI Policy Action for the Urgency field.	Urgency follows the configured policy action, including the required field state when the condition is true.	High	Sprint-1
ServiceNow Administrator / Authorized Staff	Client Script	USN-3	Create an onChange Client Script for Incident form behavior.	The script runs when the selected field value changes and produces the required field behavior.	High	Sprint-1
ServiceNow Administrator / Authorized Staff	Client Script	USN-4	Create an onSubmit Client Script for save validation.	Invalid submissions are stopped and valid data can be saved.	High	Sprint-1

The first four stories cover the UI Policy and Client Script implementation milestones.

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
ServiceNow Administrator / Authorized Staff	Client Script	USN-5	Create an onCellEdit Client Script to control list-edit behavior.	Unauthorized or invalid list edits are blocked according to the defined rule.	High	Sprint-2
ServiceNow Administrator / Authorized Staff	Testing & Enforcement	USN-6	Test mandatory field enforcement and reverse-condition behavior on the Incident form.	Mandatory behavior is enforced and reverse-condition behavior restores the expected state.	High	Sprint-2
ServiceNow Administrator / Authorized Staff	Testing & Enforcement	USN-7	Test form save validation and confirm valid/invalid submission behavior.	Invalid submissions are stopped and valid submissions are saved successfully.	High	Sprint-2
ServiceNow Administrator / Authorized Staff	Testing & Enforcement	USN-8	Test list-edit blocking and form-based updates for Incident records.	Blocked list edits cannot bypass the rule, while permitted form-based updates work as intended.	Medium	Sprint-2

Project Milestone Flow

Milestones covered: M1 Create UI Policy → M2 Create Urgency UI Policy Action → M3 onChange Client Script → M4 onSubmit Save Validation → M5 onCellEdit Client Script → M6 Testing & Enforcement.

Current project action: The supplied brief states that the group has not yet been formed. The next step is to invite a member and form a team, or start the group project individually; after starting, milestone stories can be assigned and worked through the workspace.
