

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	03 October 2026
Team ID	SWTID-2026-4310
Project Name	Implement Client Script & UI Policy (Incident)
Program / Module	ServiceNow System Administrator – SkillWallet
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed ServiceNow Incident solution.

FR-1	UI Policy Setup	Milestone 1: Create UI Policy on the Incident table. Milestone 2: Create UI Policy Action for the Urgency field.
FR-2	Client Script – onChange	Milestone 3: Create an onChange Client Script to respond when the relevant Incident field value changes.
FR-3	Client Script – onSubmit	Milestone 4: Create an onSubmit Client Script to perform save-time validation before an Incident is submitted.
FR-4	Client Script – onCellEdit	Milestone 5: Create an onCellEdit Client Script to validate or block invalid Incident updates made directly from a list.
FR-5	Testing & Enforcement	Milestone 6: Test mandatory-field enforcement, form save validation, reverse-condition behavior, list-edit blocking, and form-based updates.

ServiceNow • Incident

INC0010248

Number

INC00000000

Caller

Employee / User

Category

Software

Urgency

2 - Medium

Impact

2 - Medium

Priority

3 - Moderate

Client-side validation

1

UI Policy → controls field behavior

2

onChange → reacts to field changes

3

onSubmit → validates before save

4

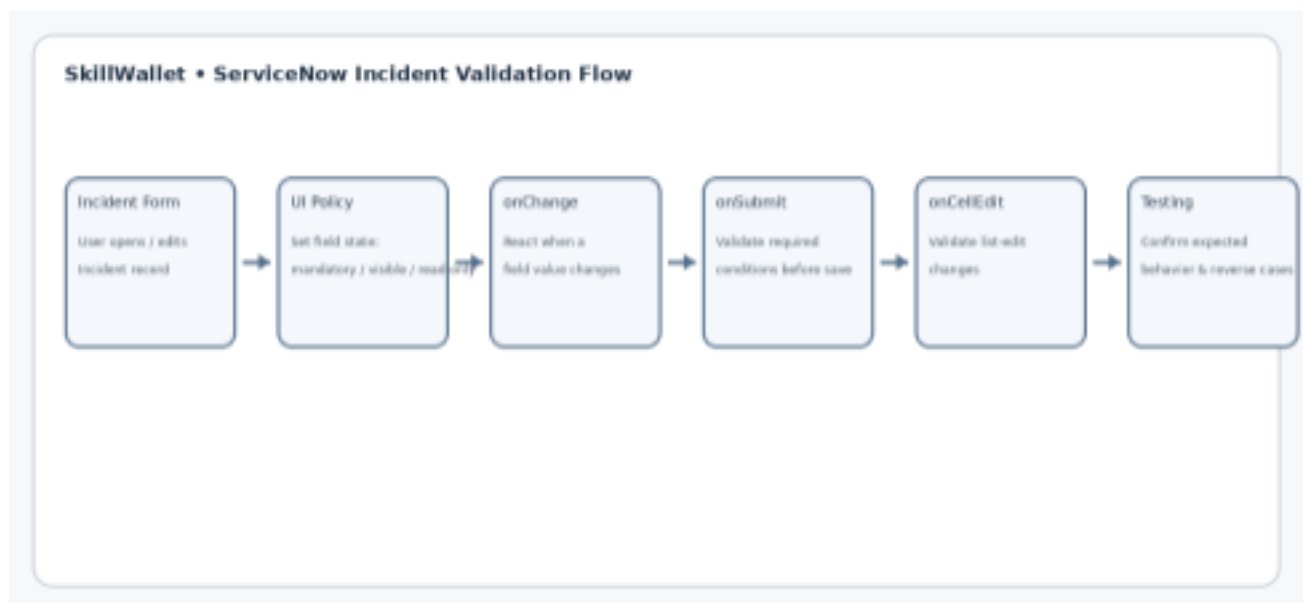

onCellEdit → validates list edits

Example: mandatory-field enforcement

Non-functional Requirements:

Following are the non-functional requirements for the ServiceNow Incident solution.

NFR-1	Usability	Incident form behavior should be clear and predictable. UI Policy and client-side validation should guide users without unnecessary steps.
NFR-2	Security	Client-side controls should complement ServiceNow access controls. Validation must not be treated as a replacement for server-side authorization.
NFR-3	Reliability	Validation rules should behave consistently for form changes, form submission, reverse conditions, and list-based edits.
NFR-4	Performance	Client scripts should execute efficiently and avoid unnecessary processing so Incident forms and list editing remain responsive.
NFR-5	Availability	The solution should work as part of the ServiceNow Incident interface whenever users create, modify, or review Incident records.
NFR-6	Scalability	The requirements should be structured so additional Incident fields, policies, and validation scenarios can be added without redesigning the entire workflow.

Project Milestone Summary

No.	Milestone	Focus
1	Create UI Policy	Incident table
2	Create UI Policy Action	Urgency field
3	Create onChange Client Script	Field-change behavior
4	Create onSubmit Client Script	Save validation
5	Create onCellEdit Client Script	List-edit validation
6	Testing & Enforcement	Mandatory, reverse, form & list scenarios
